ABSTRACT

10 The invention relates to a process for separating
two elements (1, 2) of a structure put in adherent
contact one with the other by respective adherent faces,
where the process includes a stage of application of a
force, in a localised manner in an interface zone (17),
by the bringing into contact, in the interface zone (17),
15 of one and/or the other of the said faces with separators
to initiate the separation of the two elements in the
interface zone, and to continue it, if applicable, until
complete separation of the two elements.
